**Standing Item:** **Quality Improvement/Assurance & Program Performance Reports** (Alison Stribling, HCH QI Team)

1. Follow up on Mortality Report Presentation
   a. HCH action item: calculate mean age of death for the homeless population
   b. For the sample population, the mean age of death was 55.2 years
   c. Due to small sample size HCH is not able to perform clean life expectancy calculations, limiting our ability to make comparisons to the general population
   d. The high rate of unintentional injury deaths among the population is likely a primary driver of the young age at death.
   e. Question from Board Member: Do we have data on the racial/ethnic composition of the population?
      i. Yes, the population was predominately Black/African American (38.1%) followed by White/Caucasian (30.2%) and Hispanic/Latino (23.0%).
   f. Question from Project Director: Have other County’s or HCH programs prepared similar reports? Do our findings align?
      i. Yes, studies completed by San Francisco and LA Counties.
      ii. Comparable findings that unintentional injury/overdose is the leading cause of death among the population.
      iii. Unknown if they presented information on life expectancy or mean at death for the population.
